Alternative Management Strategies to address causal pressures (i.e. causes on land & in-stream)

(Pro-forma for completion at and following the workshop. Include relevant management actions in existing plans/management strategies)

Note: Causal Pressures[1] - Based on comparing current WQ with draft WQOs
If current WQ is worse than draft WQOs, for each indicator, consider potential causes and management options
If current WQ is better than draft WQOs, consider the balance of "protection" actions to maintain WQ and "repair" actions to improve WQ

Causal Pressures[1]	Management Options	Comments
Point Sources:		
Rural (non-urban) Diffuse Sources (Changes in land use & management):		
Urban Stormwater Runoff (Changes in urban land use & management):		
Riparian Zone & In-stream disturbances:		
Flow Alterations:		
Other Causal Pressures:
